[4/1/2004 12:00:40 AM] <Investortrader> Today's action was good in it, got knocked down by the analyst opening at the low of the day and came back
[4/1/2004 12:01:14 AM] <bbmd> Do U wait a few days now to decide ?
[4/1/2004 12:01:37 AM] <Investortrader> So it still looks good here .. scary day today at the open .. that downgrade did manage to fill the 3/26 gap up
[4/1/2004 12:02:45 AM] <Investortrader> One way to try to get into it now would be watch the open, if it opens unch or up and at least holds steady (better if it begins to move up) buy there and use a stop a bit under the open so you don't get caught in a reversal
[4/1/2004 12:03:57 AM] <Investortrader> Hotto says give the analyst the first day, that was today and they didn't give him much
[4/1/2004 12:04:39 AM] <bbmd> World will be a better place without analysts !!!
[4/1/2004 12:04:48 AM] <Investortrader> It sure would be lol

[4/1/2004 5:15:44 PM] <kennethroyal> Hotto - on NTGR (a G+ stock) daily, huge pos OBV & Money Stream divergences Mar 30 & 31, TSVs nice [admit that all trend lines ema 11 thru 100 (couldn't see 200) solidly down & no support from intraday charts].

Also, there was a Yahoo 10:38 am Mar 30 announcement that existing shareholders were making 2e offering at \$13.00. Nonetheless, re the powfl pos OBV & MS

divergences, I went long \$13.80 at opening today (stopped out at \$13.67). I guess I was pretty dumb to buy into that sit'n but can you shed any other light. Incidentally, the strong pos divergence MS signal that was present on Mar 30 & 31 not present if, today, you back TC to those days so MS quite useless in retrospective studies.
